Principles

How the palette works, in five rules.

01 **Two colours never change.**

Slate Blue #416D95 and Sage Teal #74AFAD are the logo's colours. They appear exactly as they are, in every theme.

02 **Deep grounds, bright light.**

Navy and cobalt give depth; ocean teals and cyans bring the energy; ice and polar keep it airy.

03 **One accent family per post.**

A post uses its ground, the core colours, and either the teals or the blues as accent, plus at most one light tone.

04 **Colour has a job.**

One mass of colour per post carries the eye. Highlight colour goes on 1–3 words, never on whole paragraphs.

05 **Readable first.**

Every text colour is paired only with grounds where it passes contrast (page 08).

Proportions

How much of each colour a post uses. Ground dominates; highlight colour stays small.

LIGHT THEME

DARK THEME

- Highlight colour covers 1–3 words and small accents (pill, bar), about 5% of the post.
- One colour mass only: a block on light, an aurora panel on dark.

Contrast

Text colours and the grounds they may sit on. 4.5:1 for small text, 3:1 for headlines.

Logo colours

The logo keeps its own colours. Choose the lockup by the ground behind it.

Gradient lockup · white, ice, polar grounds

Gradient lockup · ice ground

White lockup · abyss, navy, cobalt, any block

- Never recolour the logo to match a post, never put it on a busy or mid-tone area, never add glow or outline.
- The gradient in the logo is Slate Blue to Sage Teal and is not edited.
